

## Tilt & Turn - Operation

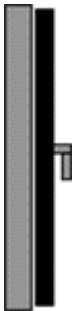

### Opening Actions:

The hinge mechanism provides 2 separate actions both opening inwards: -

1. Bottom hinged for ventilation.
2. Side hung for cleaning and as a Fire escape opening in suitably sized windows.

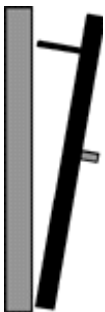

### Closed position.

Handle in downward vertical position.

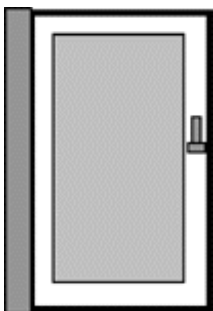

### Ventilation position.

Bottom hinged inward opening. Handle in horizontal position.

### Cleaning / F.E. position.

Side Hung inward opening. Handle in upward vertical position.

If an initial opening restrictor has been specified, this must be released to allow the sash to open. Once engaged, push the sash back to the closed position, depress the release button on top of the restrictor and then open the sash fully.
